

Neurobiologically Informed Pediatric Counseling

Join Our Free Full Day Training Event

Explore how to upgrade your pediatric counseling skills through the integration of neuroscience and pediatric mental health.

This training will focus on bottom-up approaches in addition to all-around supports for our clients from an attachment focused, trauma-informed, and neurodiversity affirming paradigm.

Topics Include:

- Complex Trauma- Sexual Abuse, Out of Home Placement, Marginalized Populations
- Differential Diagnosis- Exploring PTSD, ADHD, Autism, Dissociative Disorders, Mood Disorders
- Behavioral Presentations Acting Out- External communication of needs including aggression, defiance, stealing
- Behavioral Presentations Acting In- When behaviors are aimed inward including self-esteem, disordered eating, self-harm, suicide
- Parenting Models- Beyond Consequences, Collaborative Problem Solving, Trust Based Relational Intervention

You will walk away with a deeper understanding and tangible resources:

Handouts and Book Recommendations for Parents
Sample IEP and 504 accommodation Banks
Handouts and resources for schools
Interventions and strategies for sessions

Monday, September 25
8:30AM - 4:30PM

Presented by
Deanna McCulloch, PhD, LCPC

Dr. McCulloch is the founder & director of Connected Counseling & teaches counselor education courses in higher ed. Her research has focused in neurobiologically informed interventions for complex trauma. She is an EMDRIA Consultant and trained in various models including SMART, TF-CBT, and other play and somatic based modalities.
